

TrueView Specification Data Sheet

TITANIUM COATED ALUMINUM POLISHING FIXTURE

Part Number TC500

For Single Mode or Multimode applications, wet or dry polishing.

This UNIVERSAL ST/SC/FC polishing fixture is as hard as they come.

With a large diameter comfortable feel, the base fixture is an extremely lightweight aluminum substrate. The TC500 has a TITANIUM coating that stands up to the harshest abrasives and will last for hundreds of polishes. Unlike other polishing disks, the TC500 will not leave metallic or plastic contamination behind during its wear-resistant life.

The TC500 offers a sensible, low cost, high quality solution for kit builders, connector manufacturers and technicians. Compared to stainless steel, you can't beat the value and durability of our TITANIUM Edition universal polishing fixture.

	Construction	Remarks
<i>Dry or Wet Polish ST/SC/FC polishing disk</i>	Lightweight Aluminum Substrate With A Vapor Deposited Titanium Coating	Withstands the abuse of aluminum oxide, silicon based and diamond lapping films with no appreciable surface wear.
<i>Dimensions</i>	1 3/4" x 3/16"	More Finger Space Means Greater Control. Larger diameter eliminates disk wobble.
<i>Shipping Weight</i>	1 ounce	Less than half the weight of stainless steel which allows more sensitivity for the user.
